

## Servicio Ecuatoriano de **Normalización**

Metrology, one of the most important sciences that supports the materialization of invention and human creativity, is very important in everyday life due to the need we have for reliable measurements.

In Ecuador, the Ecuadorian Standardization Service - INEN is the body responsible for metrology and acts as the competent national body, in quantities such as mass, volume, length, force, pressure, humidity, temperature, energy and chemistry.

For this reason and in the framework of World Metrology Day, which is celebrated every May, 20<sup>th</sup> in honor to the "Metre Convention", which this year theme is "Metrology in Transport"; INEN has organized an event where several activities will be developed.

In particular this year our Executive Director has extended a cordial invitation to students, professionals, industry and the general public so that they can be part of this event. In this event, attendees will be able to get to know through conferences and an open house the operation of the laboratories, equipment and processes that are carried out daily in the Technical Direction of Metrology.

The event will be held on May 19<sup>th</sup>, 2017, starting at 09:00, at the National Metrology Laboratory of INEN located in Quito.
